Software Engineer Intern

Professional Profile

Master's student in Computer Science, eager to learn beyond my current scope and tackle challenges outside my comfort zone. Curious and adaptable, I thrive in fast-paced environments and enjoy contributing meaningfully across diverse technical areas.

Work Experience

UQAC – Unity Developer (*Fulltime*) December 2025 – Current

- Backend development of user management systems with NoSQL database integration.
- UI/UX redesign of core application interface.

SNCF Réseau – Software Engineer & Data Scientist (*Apprenticeship*) Oct. 2023 – Aug. 2025

- Identified flawed and inefficient algorithms in a business-critical C# data pipeline, redesigned the core logic and rewrote the tooling in Python with Power BI (Power Query + DAX), conducted data analysis and built graphical reporting dashboards, reducing execution time from 4+ hours to seconds.
- Developed CAD software add-ons (AutoCAD, BricsCAD) using C# (.NET) and VB.NET.
- Streamlined workflows using Power Automate and custom scripts.

Numérique Gagnant – Developer (*Apprenticeship*) Oct. 2022 – Aug. 2023

- Built automated archiving tools using PowerShell and Power Automate into SharePoint.
- Managed customer ticket resolution and hardware maintenance.
- Executed a major technical migration of a legacy website from PHP 3 to PHP 8.

Education

UQAC (Canada) – M.Sc. in Computer Science (Double Degree) 2025 – 2026

ESGI (France) – Master in VR & Video Game Development 2021 – 2026

Lycée Dorian – CPGE PTSI (Intensive Prep School) 2020 – 2021

Technical Skills

Languages: Rust, Python, C#, C++, C, PHP, PowerShell, AutoLisp.

Databases: SQL, NoSQL.

Softwares: Unity, Godot, Unreal Engine, Blender, Power BI, Git, Figma.

Awards & Competitions

Laval Virtual Student Competition – 3rd place / 13 teams April 2025

- Collaborated with a team to develop and present an innovative VR project.

Projects

MAFIS – Multi-Agent Fault Injection Simulator [\[GitHub\]](#) [\[Demo\]](#)

Research-grade fault resilience observatory for lifelong multi-agent pathfinding (MAPF). Built with Rust, Bevy/ECS and WebAssembly, implements multiple peer-reviewed solvers from scratch. Differential metrics framework across paired baseline/faulted runs; performance-optimized 3D browser simulation with deterministic replay; large-scale reproducible headless experiment configurations.

Interests

Bouldering, FPS, Chess.
